

Telescopic Artificial Grass Brush Grooming Rake

£19.99

Product Images

Description

Artificial lawns are much lower maintenance than traditional natural lawns although they do still require some routine care to ensure they stay in good condition.

Traditional garden brooms and brushes tend to flatten the tuft on artificial grass - this does the opposite and gently lifts the tuft back to its correct position whilst removing harmful debris and moss. The high grade polyamide filament bristles gently penetrate the weave of your new lawn, lifting the tuft back to its upright position and sweeping away harmful stones, leaves and other debris.

The artificial grass brush is especially suited for use during installation as it will enable blooming of the entire area as well as lifting and blending joints between sections of Artificial Grass.

Highly recommended to speed up the removal of roll pressure banding and yarn reversal that can occur in new installs.

Perfect for both DIY and professional installers with no access to a Power Broom.

This is the pro version with two lines of bristles, be aware there are very similar products of the market that only feature one line of bristles .

Ordinary garden rakes are far too heavy-handed for artificial grass, while brooms and brushes tend to flatten out the tufts, but at last here's a custom-designed solution that really works. 194 filament bristles that gently

remove moss, leaves and debris while lifting the tufts back to their original upright position, restoring your artificial lawn to tiptop condition.

- * Lightweight and easy to use
- * Double Row of High-grade polyamide filament bristles
- * Twist & lock telescopic powder-coated steel handle
- * Sweep area 45cm
- * Extends from 78cm to 130cm long with the head attached
